Biogas is a mixture of methane, carbon dioxide and H<sub>2</sub>S. If you pressurise biogas and then keep it in a tank without stirring it continuously, you're going to get layers of gas, and when carbon dioxide (>90%) goes into your engine, good luck burning it. when high pressure biogas comes to the intake manifold large amount of fuel is entered into the combustion chamber due to high pressure. So as to overcome these problems, the intake system is needed to be designed for biogas fuel. IN general, to design intake system using biogas as a fuel in petrol engine, we need to make modifications in engine.
