In order to utilize the microwave-welded SWCNT for the TENG applications, one of the most important parameters is the mechanical stability. Fig. 2a-i,ii show the Raman scattering spectra of a polytetrafluoroethylene (PTFE) film after the 2×10^4 times of contact with microwave-welded and spray-coated SWCNT electrodes, respectively. Interestingly, the tangential G- and G' modes of the SWCNT ...

Chemical engineering. Thermal runaway is also called thermal explosion in chemical engineering, or runaway reaction in organic chemistry.It is a process by which an exothermic reaction goes out of control: the reaction rate increases due to an increase in temperature, causing a further increase in temperature and hence a further rapid increase in the reaction rate.
