Probability and Statistics or also called Statistics and Probability are two related but separate academic disciplines. Statistical analysis often uses probability distributions, and the two topics are often studied together. However, probability theory contains much that is mostly of mathematical interest and not directly relevant to statistics. See also ...

Probability and Statistics. Probability and Statistics are not one and the same. The differences are not nuanced. They are Apples and Oranges. Engineers know that stress and strain are not synonymous: they don't mean the same thing, even though the popular press uses the terms interchangeably. (Stress is a force acting over a unit area. Strain is the elongation per unit of original length.

This unit on probability covers how to use simulations to calculate experimental probabilities and a variety of other methods (the addition rule, the multiplication rule, conditional probability) for calculating probability. Later, we'll use our understanding of probability to answer statistical questions.
